
Dear Customer,

Ford Motor Company has recently announced they are no longer accepting orders for chassis equipped with the 6.0L diesel engine. This disruption in chassis supply will be in effect for an indefinite period of time and has a significant impact on the EMS industry. Ford is considering a gas engine alternative, but even if this is approved, availability of these chassis is not expected for several months.

Crestline is prepared and able to offer you several alternatives. We have a limited number of Ford demo ambulances and Ford stock chassis available right now. We also have several models designed and certified for production on the Chevrolet chassis. Whatever your preference, we are able to offer you an option to suit your needs.

Crestline has led the ambulance industry in the design, engineering, testing, compliance and manufacturing of Chevrolet Gas and Diesel Type III ambulances since 2003. All of our Type III ambulances are certified for production on the Chevrolet chassis. No other ambulance manufacturer has the depth of experience in producing Chevrolet G Series Type III's. Nearly one third of our current sales are Chevrolet models, more than any other ambulance manufacturer.

As this news from Ford affects the entire ambulance industry, Chevrolet's production schedule is already experiencing a substantial increase in demand. We urge you to act quickly and plan ahead. Attached, for your convenience, is a brochure listing our current inventory. Depend on Crestline to keep your service running effectively and uninterrupted, because we take pride in being an ambulance manufacturer you can trust to meet your needs.

Avoid the possible chassis shortage by calling Crestline today at 1-888-887-6886.

Best Regards,

Tim Morrow
